COMMITMENT TO SUSTAINABILITY

Our philosophy of *environmental responsibility* and *sustainable stewardship* not only protects the land for generations to come, but also results in wines with uncompromised quality. Farming organically and responsibly, we are rewarded with fruit that achieves perfect ripeness and a complex, balanced, and singular site expression.

Sinegal Estate is certified organic through CCOF (California Certified Organic Farmers). We are also certified 'Napa Green' with the Napa Valley Vintners. Our property runs on a solar power system that produces enough electricity to power four common households. This has reduced our power cost by 80%. We are Fish Friendly Farming certified as well. This status reflects the estate's water quality – in the creek, in our lake, and in any runoff from the surrounding vineyards and gardens. We reclaim wastewater through a sustainable wastewater management system. It significantly cuts our overall water consumption by allowing us to irrigate the vineyard with all the water used in the winery. As well, Napa County lists Sinegal Lake as a designated waterfowl sanctuary.
